
Codebreaker V10 Patched - Latest Version Ps2

The following file has been unpacked with the original Codebreaker 10.1 Patch.elf. Codebreaker 10.1 Patched Elf-Original -----BEGIN PGP SIGNED MESSAGE----- Hash: SHA1 `` The 6th and last set of patch scripts is downloadable via the links below in a compressed.zip file which replaces the game files. This patch is less than a megabyte in size and can be booted on the Playstation 2/emulator guesstimated to finish loading in around 1 minute. At this time, there are no known fixes for the following: - Unknown or missed crash bugs - The game is not playable on a Dual Layer DVD player or Blu-ray player - The game has a persistent loading screen before the intro movie - The intro movie doesn't play - The game has a glitch on the guitar that skips the song "The End" If any of these issues occur, please file a bug. I will need a symbol table from the game to be able to fix it, so I'd appreciate you emailing it to me. If you should receive a "cold boot" or a corrupted save file, patching may be required. Some of the patches may require a re-patch to be applied. You will need to re-patch the files since the new ones will overwrite the old ones. -----BEGIN PGP SIGNATURE----- Version: GnuPG v1.4.10 (GNU/Linux)
