US patents The patent portfolio for AutoCAD is part of the Autodesk Intellectual Property Group (IPG). This patent portfolio includes around 400 patents for both general technology and for specific applications. The US patent portfolio comprises the following: Autodesk Non-Profit Status Autodesk is a non-profit organization. In the United States, a 501(c)(3) non-profit organization must maintain its tax-exempt status at all times. To do so, the corporation must have a purpose that is charitable in nature. In the United States, a patent protects an invention for a limited period of time in exchange for a promise to pay the inventor for the right to make or use the invention. In addition, the following patents were licensed to Autodesk from the owners of those patents, for use in AutoCAD: The US government has been critical of what it characterizes as excessive software patenting, and has for years attempted to reduce the number of patents granted in the USPTO. Autodesk in particular has been under criticism. Patents are generally granted in areas in which the patent-holder is the first to file a patent application. This is because the patent filing fee is considerably lower for a first-filed patent. The approval of Autodesk's patents by the

USPTO has also been questioned. In October 2008, the USPTO filed a series of "sunset" notices requesting that some of Autodesk's patents be re-examined. The re-examination of the patents is intended to review whether the underlying technology is still valid, as the patents have now reached the 17-year patent term limit.
