Roblox is an online game platform and game creation system developed by Roblox Corporation that allows users to program games and play games created by other users. Created by David Baszucki and Erik Cassel in 2004 and released in 2006, the platform hosts user-created games of multiple genres coded in the programming language Lua. For most of Roblox's history, it was relatively small, both as a platform and a company. Roblox began to grow rapidly in the second half of the 2010s, and this growth has been accelerated by the COVID-19 pandemic. Roblox is free to play, with in-game purchases available through a virtual currency called Robux. As of August 2020, Roblox had over 164 million monthly active users, including more than half of all American children under 16. Although Roblox has received generally positive reviews from critics, it has faced criticism for its moderation, microtransactions, and exploitative practices directed toward children. I'm sure there are better ways to do this, but here's what I did. I had to find ones with no bodies, so I took a bunch of old ones that were swirly and removed the players. So this is what I ended up with. C:\Users\Jacob\Desktop>dir /s/b . |  
MyActivity.apk | WeAreZombies.apk Then, I launched the game on my PC. The game launched. Then I found the "5:15 P.M." menu from the menu bar by going into game options. I clicked the section "Gaming Settings" to the left of there. I looked to see if there was an option to allow mouse click while in-game. I saw this: I click it, then I go back to the main menu, click the window on the right of the option to go back to the main menu. Then, click the option in the middle that says "Open Roblox" to load the game back up. The game starts up and I can play normally. That's about it. A bit crude, but it worked. If you live in a country that allows you to change your IP, edit the LOCAL network settings for your computer to change it from one IP to another. To do this, just open a new DOS window and type: C:\>ipconfig Then, in that DOS window, open up another new DOS window and type the following into it: C:\>ipconfig /setdns [your\_IP\_number] Then save the file, exit DOS, and close the two DOS

windows you opened, then launch the game. When the loading screen starts, you should see a nice "waiting for connected player" message. That's because you have a new IP. Want to know how to read people's minds? I don't and I don't want to. But if you gave me your brainwaves and some sensors to measure all the activity, then I'd be able to interpret them and tell you about what was in your mind. Now, if only I could figure out what can only be revealed by brainwaves... (like, just a theory.) But for now, I have to rely on others. According to people I've met and what I've seen in the real world, reading someone's mind is possible.
