Welcome to the evergreen SSD benchmarking utility – SSD Benchmark. This free tool is designed to examine the performance of solid state drives and laptop internal SSDs. SSD Benchmark features reliable tests for the most common SSD's and laptop internal SSDs.

SSD Benchmark gets the job done quickly, without any configuration required. SSD Benchmark is a simple yet effective benchmarking utility. SSD Benchmark can be used by anyone to analyze, benchmark and compare their solid state drives. SSD Benchmark features simple to read and understand tests that are designed to evaluate internal SSD's and laptop SSD's. The tool can be used on any modern PC and you can take a look at the drives you have installed on your machine. SSD Benchmark will display information about your system's hardware devices within its main window. To be more specific, you can view the CPU model and producer, its number of cores, the RAM memory and the system manufacturer, as well as the operating system version. You can also test the SSD's boot speed, total transfer speed, as well as its read and write speeds. You can also perform a benchmarking test, displaying the storage and read/write speed of the drive you wish to test. Looking for answers? SSD Benchmark provides answers to questions that pop up when testing a drive and it also provides tips to help you get the most out of your SSD. Also check out our XtremIO 2TB SSD Review. So a while back I thought I'd do my own side by side with the X1 Carbon and chose the X1C. Then thought I'd revisit that decision and take the Macbook Pro 13 inch instead. It's been 6 months since I last updated so I figured I'd make a new comparison video based on the 6 month use since I last did one.

This time I benchmarked the X1C and Macbook Pro 13". Both of these laptops are currently 2nd Gen and 6 months old so hopefully the benchmarks make sense. Differences for the X1C: I chose the 6-cell battery with the 2 speakers and it felt like a slightly more compact version of the 5-cell. I have since picked up the new 7-cell X1C version and now really wish I'd gone for the 6-cell instead. I also changed the SSD for the price of a dead hard drive to a stock 128 GB 7200rpm SSD. Differences for the Macbook Pro: The Macbook Pro has had a firmware 09e8f5149f
