KEYMACRO is a simple tool for quickly creating keyboard macros. Its main purpose is to make your task more efficient and save you time. The application doesn't come with any complicated tools or options that could confuse you. In its most simple version, it is simply a text file with the name of the macro and the text that you want to insert each time you want to trigger it. Keyboard macros are basically a list of characters that you insert into the text every time you want to trigger the macro. In the end, you will have several lines of text with different combinations of the keyboard characters that you inserted. The macro lets you insert text by pressing a single character or string of characters. You can insert characters or just some parts of the current text. You can also insert a number to execute the same function the number of times you set, you can set a delay, and there's the option to make the macro conditional and repeat the same or different options. For example, you can make the application execute the macro that you inserted every time you start typing in a file, or every time you open a web page or you want to execute the macro the first time you press a key combination. Keyboard macros are useful to make your work more efficient and save you a lot of time. KEYMACRO Main Features: KEYMACRO is a simple tool for quickly creating keyboard macros. Start the ping-server or the all-routers you want to test online and quickly test the response of the address. The results are shown in a table, the table gets a basic overview by default, but you can customize it in different ways. For example you can enter the network name and its subnet, include the type of server or set a custom description. And the result is shown in a table, with basic and customized options. Homepage: Simple, quick and powerful ping tool for your home network. With this application you can check the responsiveness of the computers on your home network and discover weak links. With the help of the graphical interface you can quickly test a specific address of a network server. You can even create a list of up to 20 networks and check the responsiveness for every single address. The application also features a detailed network topology view, a list of active hosts, the network map and an extensive list of hosts. Configuration settings and user options: Specify the IP address of the target or the computers to be tested. Activate the log and select the maximum number of retries. You can add a label and a description for each entry. Connect to a server: The application automatically creates a tunnel through which ping packets are sent. Specify the port number of the server on which the ping packets are to be sent. Overview of the tested network: Enter a name for the network, subnet, the amount of subnet addresses and the maximum number of subnets. You can enter a location and a reason why you need to test the target. Topology view: Configure the display of the graphical interface. You can define the name of the network, the amount of columns, the number of boxes and the number of addresses. Host list: Create a host list. Basic settings: Press the Clear button to clear the host list. Press the Start button to start pinging the hosts. Press the Stop button to stop pinging the hosts. Press the Start button to change the setting. User settings: Define the IP address of the server on which the ping packets are to be sent. Select the tunnel type to be used. Network maps

What's New in the?

The Internet is filled with all sort of neat software solutions that you could use in order to enhance features on your computer and take advantage of all functions and tools. Simplistic but colorful layout with some tools The application doesn't take long to install on your computer and it doesn't come with a complicated setup that you would need to complete, before you can actually use its features. It sports a really nice graphical interface, small but very colorful that neatly displays all necessary information on the screen and lets you make some adjustments to its settings. Test servers and network components Extended Ping lets you create a whole list with addresses that can be periodically tested.
