- The application can perform checksums checks of files and folders, compare checksums of files and folders and decrypt checksums of files. The utilities will check files and folders, and if not found, you will be prompted to indicate the path of the file. If the file exists, the utility will print the checksum and will compare them with the previous. - In addition, the utility can generate checksums for files and folders, and if the hash is not valid, you will be prompted to enter a new checksum. - The utility can perform the same operation using regular expressions. - All checksums are calculated using SHA256 as the algorithm. - A salted hashing algorithm is also available. - Calculated checksum results are stored in a Database file for later comparison. - Two options are available to define the result of a comparison of two checksums: - Shows only the differences. - Shows both the differences and the identical ones. - In addition, you can always manually override the result of a comparison, even if you choose to show only differences. - The utility can calculate checksums of almost all files and folders, such as: files, folders, images, audio files, executable files, archive files, raw files, videos, etc. - The utility does not need to be run as Administrator, but it does require Administrative privileges. - The application is not suitable for all operating systems, but it will work on all 64-bit operating systems. - The utility includes support for Windows 7, Windows 8, Windows 8.1, Windows 10, Windows XP, Windows Vista, Windows Server 2008, Windows Server 2008 R2, Windows Server 2012, Windows Server 2012 R2, Windows Server 2016, and Windows Server 2019. - The application supports almost all types of text files. - If you have problems with the application, please read the FAQs before asking for help. \*\*\*For support, use the forum or the support section of the forums.\*\*\*

What's New in the SX Hash Suite?

SX Hash Suite includes eight utilities to handle hashes. DownloadHashVerifier is a command line utility to verify checksums for a given list of files. HashGenerator generates hashes for specified text files, ideally you would use the same or similar text files as the ones you want to verify. HashCompare is a command line utility to compare two lists of hashes to determine which one is the correct one. HashCracker is a command line utility to crack hashes, using MD5, SHA-1 and SHA-256. HashCrackerConsole is a graphical program for cracking hashes using SHA-1. MD5SaltedHashCracker is a graphical program for cracking hashes using MD5 and salted MD5. SaltedHashGenerator generates salted hashes for files, ideally you would use the same or similar files as the ones you want to verify. SHA256SaltedHashCracker is a graphical program for cracking hashes using SHA-256 and salted SHA-256. Installation: To use SX Hash Suite: 1. Extract the files to a folder. 2. Run the program.
