Unfortunately, using a protractor with pencil and paper is both inaccurate and difficult to use. If you are trying to make sure that you are drawing perpendicular lines and drawing perfect 90 degree angles, Squadra is for you. It has all the tools you need to accomplish this task and if you don't feel like drawing, you can just use the measurement feature and you will be able to draw a 90 degree angle or perpendicular line with ease. From Eppendorf: Wanna measure the size of that building? Just click the measurement tool and you will be able to drag it to where you want it to be placed. You can also click the number next to it to get the exact value of the dimension that you have selected. Squadra also has a simple way to make use of the 90 degree angle. If you click the measurement tool and hold down the left mouse button, it will allow you to draw a 90 degree angle. After that you can just press the Enter button to end the drawing. This program uses the Tkinter GUI toolkit. Installation I install it on my computer using Python 3.5.1 and Python 3.6.5, on Windows 8.1 and Windows 10. I have written a code for Python 3.5.1 using the Windows cmd (Windows command line), but I am sure that it should be easy to adapt the
