Nov 5, 2012 All new roads for San Andreas. Best of all, Roads in all three cities and all of their suburbs! Very smooth and realistic roads. Oct 24, 2012 All new roads for San Andreas. Best of all, Roads in all three cities and all of their suburbs! Very smooth and realistic roads. Oct 24, 2012 Best of all, Roads in all three cities and all of their suburbs! Very smooth and realistic roads. All new roads for San Andreas. Best of all, Roads in all three cities and all of their suburbs! Very smooth and realistic roads. Brushless motors typically have a commutator and a set of commutator-side conductive segments. The commutator-side segments are commonly known in the art as commutator bars. Typically, the brushless motor can be operated on DC power, a pulsed DC power (PWM), or AC power. The segments have to be correctly phased so that the commutator-side segments and the brush-side can conduct current to and from the motor windings without damaging the windings and the commutator. A phased arrangement of commutator-side segments is typically created by connecting the commutator-side segments to the commutator and interconnecting them in a predetermined order. One embodiment of a motor having a brushless motor drive is disclosed in U.S. Pat. No. 5,886,249. The motor of this embodiment is mounted in a vehicle and is powered by a battery in the vehicle. The brushless motor drive has an input terminal electrically coupled to a battery that powers the brushless motor drive. A ground terminal is electrically connected to the vehicle frame. A first brushless motor segment carries current from the input terminal to the ground terminal. An output segment carries current from the ground terminal to the input terminal. Another embodiment of a brushless motor drive is disclosed in U.S. Pat. No. 5,999,883. This brushless motor drive has a brushless motor assembly disposed in a vehicle to rotate a wheel. The brushless motor assembly has an armature in a motor housing in which a plurality of phase windings are disposed. A number of rotor bars are disposed in the armature and are connected to one another. The rotor bars connect to a commutator and commutator segments. The commutator segments are connected to the phase windings. Yet another embodiment of a brush 1cb139a0ed
