What's New In Waveface?

Simple, powerful, easy-to-use photo organizer. Features include batch upload, simple one-click access to all of your photos on your PC, advanced organization of photos and folders, easy uploading to Facebook, Twitter, and Instagram. User Contributed Notes 3 notes Waveface is amazing! I've used it to automatically upload my photos to Facebook, Facebook Stream, Dropbox, Flickr, Skydrive, SmugMug, and Picasa, as well as email to myself and print. Waveface for the Mac is also great! It has a cool "drag to transfer" feature that lets you take a few moments to drag a folder from the desktop to the app and voila, it's all uploaded automatically. If I have a couple of hours of video I can simply drag the entire contents of my home folder and it will upload all of it to the cloud. Recently Waveface quit working in my Mac OS 10.7.5. I'm not sure whether it's only working for me and not for you. I think Waveface it's much more than a picture uploader. You can manage your contact with your contacts list and select with style (clothes, food, city, etc) that what to send to Facebook or Facebook Stream. You can also put a preview on the contacts list, in order to have them look pretty, with the dropbox photo support, you can put a dropbox icon on the contacts list. There is also a real good control panel with many options, like the Google, you can mark your photos with a tag for you to reorder them, you can mark them in order of importance, you can resize your photos and compress them. And a lot of other things, like the settings you can setup for upload (to Facebook, Google, Skydrive, Picasa, Dropbox, Apple...), you can also setup the delay before the uploading (1 sec, 5 min, 24 h, etc), you can create a password for the service if you want to not share your images with the world. I'm using it to take pictures with a click, so I can pick up my phone and send my photos to Facebook, Twitter, Picasa... If you can have a service like that, even if you use the mobile device, it's really great! Its been about a year and a half since I started using this software for Windows and Mac. In that time, I have sent tens of thousands of photos to friends, family and myself via their Facebook account. It is very simple and intuitive to use. I was able to use it without difficulty. It uploads my photos easily. I never have to worry that it might not upload correctly or incompletely or when the WiFi connection is down. The instructions for how to do things are very well laid out. I also like that you can control the size of the image you

System Requirements For Waveface:

• Minimum system requirements are Intel Pentium 4 2.8 Ghz CPU • Video card must be a 32MB ( DirectX compatible ) • 2GB of RAM • 800 x 600 minimum display resolution • CD-ROM with a speed of at least 18x (or 40x if you're copying from a DVD) • Hard drive with a minimum of 20 GB of free space • DirectX 9.0 or later (only if using a DVD) • DX9 or later graphics card • 30 MB of
