HTML5 Blackjack In the video we see a programming project we did for an assignment in the Computer Networking class at Colorado State University, in which we used a microprocessor and a small software program to create a table-based blackjack program. We created the blackjack software program by doing a little research on what other blackjack programs were using, and then used our skills to build our own program. The project was just a starting point into learning how to use the very powerful AVR microprocessors. Although the researchers caution that their study does not show cause and effect, they suggest that the relationship may be due in part to the fact that the internet makes it possible to get good grades and easy access to information. The study, which was published today in the Proceedings of the National Academy of Sciences, will be presented Thursday, May 3, 2007, at the annual meeting of the Society for Research on Learning in the College Classroom. "There's a lot of research on the relationship between academic achievement and school behaviors, but very little research on the ways in which youth's use of technology influences their academic achievement," said senior author Susan Fiske, the Ann Romney Professor of Psychology at Northwestern. "As we know from other studies, school achievement has a lot to do with home environment, and a critical part of that is socioeconomic status. But what this study adds is that
