1660 V34 A: It can be done with Odin. You need to download ODIN firmware tool from and extract Odin.exe from archive. After successfully running Odin program, press "Restore" button. The process can take a while, just be patient :) Differential alterations in beta-1- and beta-2-adrenoceptor gene expression during the development of salt-induced hypertension. In order to determine whether there is a relative deficiency in beta-2-adrenoceptors which leads to increased vascular resistance during the development of hypertension, the present study assessed whether there was a relative deficiency in beta-2-adrenoceptor expression at the mRNA level in the aorta of rats with salt-induced hypertension. For this purpose, we measured the relative abundance of transcripts encoding for the beta-1- and beta-2-adrenoceptor subtype in the aorta of 3-, 12-, and 24-week-old Dahl salt-sensitive rats and their age-matched Dahl salt-resistant (DSR) rats. The relative expression of the beta-2-adrenoceptor was higher than that of the beta-1-adrenoceptor in the aorta of both the DSR and DS rats at all ages studied. Although the increase in blood pressure was more pronounced in the DSR rats than the DS rats, the difference in the expression of beta-1- and beta-2-adrenoceptors was similar to that of the blood pressure. Compared to the 3-week-old DSR and DS rats, there was a marked

increase in the relative expression of the beta-2-adrenoceptor in the 12- and 24-week-old DSR rats (by over twofold) but a relatively smaller increase (less than 50%) in the 24-week-old DS rats. In contrast to beta-1- and beta-2-adrenoceptor expression, the expression of alpha-1B- and alpha-1D-adrenoceptors did not show a significant change in either the DSR or the DS rats.(ABSTRACT TR d0c515b9f4
